

Types of Fractals

We have two types of fractals and we are going to have a very short lesson on the two types.

Type One

Exact Self Similar Fractal.

Exact means spot on or completely correct.

When a pattern is Exact self similar it means it is repeating itself completely correct as it is. The pattern is the exact repeat of itself.

Type two

Quasi Fractals are not completely correct or exact. There are some changes in the repeated patterns. I hope that you will be able to see it on your own.

Let us take a look at God's amazing creation and see if you can identify the quasi and exact fractals in the patterns God designed them with. Study the pictures well. Notice the similarities and changes in the patterns.

In our Reform lines God uses both Quasi and Exact self- similar fractals. God is really cool right? There are some patterns that are exact self-similar like the one we learnt about so far.

New Message - Boston

Increase of Knowledge - Concord

Formalisation - Exeter

Test!

As we look more into how God has been leading different groups of people out of darkness we will see that not everything that happens in their journey is the same. This is what we call the Quasi Fractals.

You will understand better along the way as we study more examples. Learn the Fractals song and practice it daily. Don't forget to Enjoy it!
